Professional Summary

Aspiring Data Analyst and Machine Learning enthusiast pursuing a B.Tech in Computer Science Engineering. Experienced in building data-driven applications involving preprocessing, statistical analysis, feature engineering, machine learning, visualization, and full-stack deployment using Python, SQL, React, and FastAPI.

Skills

Programming Languages: Python, C++, SQL
Data Analysis & Machine Learning: Pandas, NumPy, Scikit-learn, Statistical Analysis, Data Preprocessing, EDA, Feature Engineering
AI & GenAI: LLM Fundamentals, Prompt Engineering, RAG Concepts
Visualization & BI: Power BI, Tableau, Excel, Matplotlib, Seaborn, Plotly
Web & Application Development: React, Next.js, FastAPI, Streamlit
Databases & Cloud: PostgreSQL, Supabase, MySQL, SQLite
Tools & Deployment: Git, GitHub, Docker, Jupyter Notebook, Vercel, Render
Relevant Coursework: Data Structures & Algorithms, DBMS, OOP, Computer Networks, Operating Systems
Soft Skills: Analytical Thinking, Problem Solving, Teamwork, Communication, Adaptability, Time Management

Projects

DetaBeta – Automated Data Science Workbench *Jul 2026* Live Demo

- Built and deployed a full-stack workspace that automates CSV profiling, data-quality diagnostics, statistical investigation, feature recommendations, model comparison, explainability, and research-report generation.
- Developed a React/Next.js interface and FastAPI backend with user-scoped PostgreSQL/Supabase persistence, private object storage, and non-destructive dataset versioning.
- Implemented Scikit-learn classification and regression workflows with preprocessing, cross-validation, model leaderboards, permutation feature importance, and row-level contribution explanations.
- Secured the application with Google/GitHub OAuth and JWT-based backend access; deployed it on Vercel and Render with HTML, Markdown, and PDF-ready report exports.

ForeTrade – Enterprise B2B Trade Intelligence & Matchmaking Platform *Feb 2026*

- Engineered an enterprise cross-border trade platform ingesting customs Bill of Lading manifests, UN Comtrade bilateral flows, and WTO tariff schedules to match exporters with verified international buyers.
- Developed 5 real-time ML systems: a two-tower recommender for buyer-seller compatibility ("Swipe-to-Export"), an XGBoost transaction risk classifier, a time-series corridor demand forecaster, and an LLM pitch generator.
- Built a responsive Next.js 16 and FastAPI cockpit with an Incoterms 2020 landed-cost engine (EXW to DDP with FTA tariff savings), deal pipeline CRM, and automated SQLite/PostgreSQL persistence.

ChainGuard – Cryptocurrency Transaction Fraud Detection *Nov 2025*

- Developed a cryptocurrency fraud-detection pipeline using Random Forest, XGBoost, Neural Networks, and Isolation Forest for supervised and anomaly-based risk assessment.
- Preprocessed and analyzed the Elliptic transaction dataset using feature engineering, label filtering, scaling, and stratified train-test splitting.
- Built an interactive dashboard for fraud prediction, risk scoring, alert generation, and SQLite-backed transaction persistence.

Education

Sardar Patel Institute of Technology *Sept 2024 – July 2028*
Bachelor of Technology (B.Tech) in Computer Science Engineering
CGPA: 8.1 / 10.0

Certifications & Training

Complete Data Analyst Bootcamp: From Basics to Advanced – Udemy *July 2026* Credential
